Why PawLenx?

I want to join PawLenx because I'm excited about building AI-powered products from the ground up in a fast-moving, early-stage environment. The focus on intelligent workflows and rapid iteration aligns with how I like to build shipping quickly, learning from users, and refining continuously. As a product-minded engineer, I'm motivated by ownership and impact, and I see PawLenx as the kind of ambitious environment where I can contribute meaningfully while helping shape something from zero to one.

Unique Value & Contribution

I bring a combination of full-stack mobile development skills and product thinking. I don't just focus on writing code, I think about user experience, speed of execution, and how features contribute to overall product goals. I'm comfortable building from scratch, iterating quickly, and making practical technical decisions that prioritize shipping and validation.

In an early-stage environment like PawLenx, I would bring ownership, adaptability, and a strong bias toward action helping turn ideas into functional, user-ready AI-powered features efficiently.

Pet Experience

Yes, I have a dog named Jack. Taking care of him has helped me understand the responsibility and emotional bond that comes with pet ownership. It's given me real insight into the needs and expectations of pet owners, which I believe is valuable for building thoughtful, user-centered products in the pet space.

& Resume attached separately in applicant folder.
