Skills & Expertise

Frontend Development   UI/UX Design   Project Management   Firebase.

Why PawLenx?

PawLenx sits at the intersection of three things I care deeply about: mobile technology, AI-driven experiences, and pets. The opportunity to build an AI-powered companion product from the ground up is exciting because it combines meaningful user impact with advanced technical execution.

I'm particularly drawn to the founding-level ownership and early-stage environment. Building an MVP,

shaping AI workflows, and directly influencing product direction is where I perform best. I enjoy ambiguity, rapid iteration, and taking a product from concept to scalable foundation.

The idea of creating intelligent systems that improve pet wellbeing through personalized insights and smart guidance feels both commercially strong and emotionally meaningful. That combination makes PawLenx compelling to me.

Unique Value & Contribution

I bring a rare combination of low-code execution speed and structured backend thinking.

Strong hands-on experience building production apps with FlutterFlow and Firebase

Experience integrating APIs and AI-driven workflows into mobile products

Ability to architect scalable database structures and clean logic from day one

Founder mindset: ownership, fast iteration, and solution-oriented thinking

Experience shipping apps to Play Store and App Store

Beyond technical execution, I think in systems. When integrating AI features such as OpenAI Vision or generative pipelines, I focus not just on "making it work" but designing flows that feel intuitive, intelligent, and reliable for users.

As a founding engineer, I would help ensure the MVP is not just fast to launch, but built on foundations that can scale without needing to be rebuilt later.

Pet Experience

Yes, I currently have three cats: two parents and their kitten (not a kitten anymore, but still feels like a baby).

I have kept different pets throughout my childhood. Started with birds, they used to die very often, and I would be heartbroken. Then kept fishes and turtles for like 5 years, before all of them died together because of a fungus.

And now I have happy and healthy three cats!
